

Workshop on 5G coverage along transport corridors

A workshop on **5G transport** corridor deployment efforts and project pipeline building will take place in Brussels on **10 October**.

Following the launch of the first projects funded by the Connecting Europe Facility (CEF), a workshop will take place in Brussels on 10 October to provide guidance to 5G corridor deployment efforts and stimulate project pipeline building.

The GUIDE project (a Coordinated Support Action under the first CEF Digital 5G Corridor Call), together with HADEA and DG CONNECT, are proposing this face-to-face workshop hosted by the European Commission to review the 2 Strategic Deployment Agendas published in 2020 in the fields of rail and road. The objective is to provide guidance to 5G corridor deployment efforts from the public and private sectors and stimulate EU-funded project pipeline building.
