Are you planning the next step in your career? Then why not embark on a PhD with the Marie Skłodowska Curie Actions (MSCA) programme?

The MSCA are the European Union's flagship programme for Doctoral Education and Post Doctoral Training. It supports researchers from all over the world, in all scientific disciplines and at all stages of their careers.

- Doctoral Networks allow PhD candidates to receive high-quality training and develop their career in and outside academia by moving to another country.
- Post doctoral Fellowships are for researchers holding a PhD to undertake their own research project at a host organisation in another country.
- Staff Exchanges support short-term staff exchanges between organisations worldwide to enable international and intersectoral cooperation through knowledge transfer.
- COFUND supports PhD and postdoctoral researchers through high-quality fellowship or doctoral training programmes.
