

European Convergence Summit 2024

The **European Convergence Summit (ECS) 2024** will be organised by the Adra-e project on **19 June 2024**.

The event will be held online. To access the event [please register here](#) and you will get the link to join the event in the upcoming weeks.

The ECS is a high-level event that aims to bring together influential figures from various backgrounds to support co-programming of the Artificial Intelligence Data and Robotics (ADR) partnership, define orientations for ADR research and innovation in Europe with respect to socioeconomic issues, and build a consensus among stakeholders. The overarching theme of the event will be the impact of ADR on energy/CO2 reduction.

One of the main objectives of ADRA-e is to highlight success stories in AI, Data and Robotics, and this is the aim of this exhibition: to showcase the technologies emerging at the frontiers of the disciplines to outline promising future paths for ADR by exhibiting high-impact demonstrations of interaction between at least two of the three technologies: AI, data and robotics.
