

Synthetic Data for AI Conference

The use of synthetic data has emerged as an interesting technique to respond to the increasing demands for data to fuel data analytics and AI, especially in cases where sensitive information is involved.

Synthetic Data for AI Conference - Brussels, Belgium 10 of September

This event will showcase the potential of synthetic data and explore potential limitations in ensuring full information privacy.

Join our panellists during a dedicated conference as they discuss the role that synthetic data can play in the digital economy, strategies to promote its use and the associated risks.
